 Sircilla, Telangana,

INTERNSHIPS & TRAINING

AR/VR Test Engineer & Unity Developer Training

March 2026 – May 2026

at Indian Institute of Technology Hyderabad |

- Developed immersive AR/VR applications using Unity 3D and XR technologies
- Conducted performance, usability, and interaction testing for VR systems
- Identified and resolved latency, tracking, and compatibility issues
- Optimized Unity environments for seamless user experience and performance

Project during Training:

SignAR – AI-Based AR Sign Language Translation System

- Developed an AI-powered sign language recognition system integrated with Unity for real-time gesture visualization
- Implemented hand/gesture tracking using computer vision and keypoint-based pose detection
- Integrated AI model outputs with a 3D Unity avatar to animate sign language gestures in real time
- Worked on performance optimization, testing under different lighting/user conditions, and UI interaction flow

Data Science & Machine Learning Trainee

Nov 2025 – Jan 2026

Online Training

- Completed hands-on training in **Python, Data science, and Machine Learning**
- Worked on real-world datasets for **classification and prediction problems**
- Implemented ML algorithms including **Linear Regression, Decision Trees, Random Forest, and SVM**
- Performed **data cleaning, feature selection, and model evaluation and model tuning**
- Applied concepts through projects such as **Semiconductor Manufacturing Yield Prediction Process.**

AWS Cloud Practitioner – Practical Training

Certification-Oriented Training

June 2024 - Oct 2024

- Gained practical exposure to **AWS core services: S3, EC2, Lambda, and VPC**
- Learned cloud fundamentals including **compute, storage, networking, and security**
- Understood basic cloud deployment concepts and cost optimization
- Applied AWS knowledge alongside data-driven applications

PROGRAMMING LANGUAGES AND TOOLS

- **Programming Languages: Python, Swift, Swift Ui, SQLite**
- **ETL: Databricks, Snowflake**
- **Databases: MySQL, MongoDB**
- **Tools: vs code, anacondas, Xcode, Jupyter Notebook.**
- **Cloud Platforms: AWS.**

DATA ENGINEERING SKILLS:

ETL | Data Warehousing | Relational Databases | Data Storage | Data Mining.

AWS CLOUD PRACTITIONER SKILLS:

S3 | VPC | Lambda | EC2 | MongoDB | AWS Networking and Security | AWS ALB.

EDUCATION

Sri Indu College of Engineering and Technology

2021 – 2024 | Hyderabad

B. Tech - Data Science - 7.0/10. 0 CGPA

Jyothishmathi Institute of Technological Sciences

2018 – 2021 | Karimnagar

Diploma in electrical and electronics – 6.64/10.0CGPA

PROJECTS

Semiconductor Manufacturing Yield Prediction Process

- Built a machine learning model to **predict pass/fail yield in a semiconductor manufacturing process using sensor data.**
- ❖ Cleaned and prepared high-dimensional data by handling missing values over 591 attributes and performing exploratory data analysis (EDA). Applied feature selection and preprocessing techniques to improve model accuracy and reliability.

- ❖ Trained and tested multiple classification models including Random Forest, SVM, and Naive Bayes.
- ❖ Used cross-validation and Grid Search to tune hyperparameters and improve performance.
- ❖ Selected and saved the best-performing model for future use.

Skills: Python, Machine Learning, Classification, Data Analysis, Feature Selection, Model Evaluation

Face Emotion Detection Analysis Using Machine Learning

- Led a systematic review of **over 30 machine learning applications for ADHD** and depression diagnosis, determining the success rates of each method and highlighting 5 models for potential future integration into clinical practice.
- ❖ Both ADHD and depression are highly prevalent mental health conditions. Depression affects approximately 19.7% of people aged over 16, while **ADHD affects around 7.2%** of all age groups.
- ❖ Impact: These conditions have a substantial impact on **individuals' quality that lead to increased suicidal.**
- ❖ Analyzed **over 10,000 patient records** using diverse ML approaches like support vector machines and decision trees; established reliable tools supporting accurate diagnosis of ADHD symptoms during virtual assessments.
- Evaluated the effects of ADHD and depression on approximately **26.9%** of individuals aged over 16. findings underscored a critical connection to deteriorating quality of life and heightened risk for suicidal thoughts.

Crime analysis on women using Machine Learning.

- Developed predictive models using diverse machine learning algorithms that processed over 5,000-7000 records on crimes against women; findings assisted in formulating targeted community safety initiatives & resource allocation.
- ❖ Analyzed global crime data trends impacting women, identifying over **300 distinct incidents** of rape, trafficking, kidnapping, and murder reported within the last year to inform predictive model development in machine learning.
- ❖ Data Sources: Utilize crime data from various regions, including reports of different types of crimes against women of over up to 10000 reports.
- ❖ ML Techniques: Employ algorithms such as **Linear Regression, Random Forest, Decision Trees**, and **K nearest neighbors to analyzing and prediction of crime patterns.**

Developed accurate ML models to predict crime rates against women with over 90% accuracy, aiding in preventive measures.

ACHIEVEMENTS AND PARTICIPATIONS

-
- Achieved **Aws Cloud Practitioner** Certificate from Amazon.
- Achieved **Certificate of Training** From **CORZIO**
- Achieved **Python in Data science** Certificate from Infosys Spring board, cisco networking.
- Achieved **python** Certificate from CPDA 2024.
- Shortlisted for Smart India Hackathon 2023.

SOFT SKILLS

- Leadership, Communication, Team Work.
